PROFESSIONAL SUMMARY

Product-minded Full-Stack and AI Engineer with 5+ years of experience building production SaaS, event-commerce and e-commerce products. Owns products from discovery and architecture through frontend, backend, data, deployment, analytics and continuous improvement. Strong in TypeScript, React, Next.js, NestJS, GraphQL and PostgreSQL. Builds AI-powered product experiences and uses AI-assisted engineering workflows to accelerate research, prototyping, implementation, testing and debugging.

TECHNICAL EXPERTISE

Frontend: TypeScript, JavaScript, React, Next.js, React Native, Tailwind CSS, Shadcn/ui, Redux, React Query, Framer Motion, GSAP, responsive design, accessibility and performance optimisation

Backend & Data: Node.js, NestJS, Express.js, GraphQL, REST APIs, PostgreSQL, MySQL, MongoDB, Prisma, TypeORM, Redis and background jobs

AI Engineering: OpenAI & Claude APIs, LLM-powered workflows, natural-language command systems, AI search and recommendations, business insights, image generation and prompt/workflow design

Product Engineering: SaaS architecture, multi-tenancy, zero-to-one development, system design, product analytics, monetisation, onboarding, user feedback and iterative delivery

Cloud & Tooling: Stripe, Docker, CI/CD, AWS, GCP, Vercel, Railway, PostHog, Git/GitHub, Claude Code, Codex, Shopify, Jest and Cypress

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Product Engineer

TALLYN (tallyn.app), United Kingdom

January 2026 - Present

- Founded and built Tallyn, a multi-tenant SaaS platform for managing sales, inventory, customer debt, expenses, profit, staff and business documents; own the full product lifecycle from strategy and UX through architecture, development, deployment and iteration.
- Built a production TypeScript monorepo using Next.js, React, NestJS, Prisma and PostgreSQL, including secure authentication, Google OAuth, workspace permissions, staff visibility controls, subscription tiers and Stripe billing.
- Developed an AI command system that converts natural-language requests into validated business actions across sales, inventory, expenses, payments and customer records, alongside AI insights, daily briefings and receipt/image-assisted workflows.
- Delivered a complete document system for invoices, quotations and receipts, including live previews, branded PDF generation, VAT and tax calculations, payment details, custom templates, signatures and stamps.
- Shipped reporting, refunds, payment history, product exports, expense categorisation, walk-in sales, multi-currency support, WhatsApp reminders and customer-balance management across web and mobile experiences.
- Onboarded approximately 50 early users and use PostHog analytics, onboarding funnels, engagement campaigns, operational dashboards and direct feedback to improve activation, retention and product usability.

Software Engineer

BLOCO LTD, United Kingdom

May 2024 - Present

- Design and deliver full-stack features across customer-facing products, organiser platforms and internal tools, working extensively with React, Next.js, TypeScript, NestJS, GraphQL, PostgreSQL, TypeORM and Redis.
- Build responsive, accessible and highly interactive frontend experiences covering ticket discovery and checkout, artist pages, dynamic forms, event management, customer accounts, analytics dashboards, memberships, campaigns, payouts and administrative workflows.
- Develop complex UI systems including visual page builders, live previews, configurable themes, reusable design-system components, data visualisations and mobile-responsive interfaces for white-label products with custom branding and domains.
- Build the APIs and data workflows supporting ticketing, Stripe payments, recurring and timezone-aware events, per-occurrence inventory, memberships, custom domains, role-based access, email campaigns, audience segmentation, notifications and analytics.
- Implement AI-powered features including event discovery, contextual recommendations, customer-support experiences and flyer generation, with usage controls, safety handling and reliable product fallbacks.
- Own features from technical discovery and architecture through implementation, testing and release, while improving performance and reliability through shared frontend libraries, automated testing, database migrations, Docker, CI/CD, cloud-build workflows and selected Shopify integrations.

Software Engineer

GO WFO, United States (Remote)

September 2023 – August 2024

- Collaborated with product, design and engineering teams to build a social-networking platform for the extreme-sports community.

- Developed responsive and optimised product experiences using React, Next.js, JavaScript and TypeScript.
- Worked across PHP, Node.js, MySQL and PostgreSQL services to improve platform structure, performance and scalability.
- Integrated internal systems and third-party APIs, supporting secure and reliable data flows across customer-facing products.

Frontend Engineer

Felsunny Technology LTD, Abuja (Remote).

May 2022 – September 2023

- Designed and built the company's electric-mobility platform using React, Next.js, TypeScript and Tailwind CSS, creating a polished, responsive experience for discovering electric vehicles, charging products and commercial mobility services.
- Developed data-driven vehicle and charger catalogues with dynamic detail pages, image galleries, technical specifications and personalised charger recommendations, alongside savings calculators, test-drive bookings, commercial enquiries and contextual WhatsApp lead flows.
- Created a reusable frontend architecture and design system with responsive components, smooth scrolling, page transitions and motion-rich interactions using GSAP and Framer Motion, delivering a consistent experience across mobile and desktop.
- Improved performance, SEO and customer acquisition through static page generation, optimised media, structured metadata, canonical URLs, sitemaps and conversion-event tracking—contributing to a 50% reduction in load time and a 15% increase in conversion.

Frontend Engineer (Part-Time)

Walker's Supermarket, United Kingdom (Remote)

August 2023 – November 2023

- Built reusable React components and responsive interfaces for an existing Shopify storefront, improving functionality and customer experience across desktop, tablet and mobile.
- Reproduced visual designs accurately and performed cross-browser testing, code reviews and frontend quality assurance.

Web Developer (Contract)

Loved Youngsters (Remote)

July 2023 – August 2023

- Designed and delivered a responsive website using React, Next.js, TypeScript and Tailwind CSS, focusing on usability, performance and maintainable component architecture.

Freelance Web Developer

Self Employed

December 2020 – May 2022

- Leveraged expertise in modern web technologies (like JavaScript, TypeScript, React, Next.js, Redux, Tailwind CSS etc.) to develop customized web and mobile apps for 10+ clients ensuring an exceptional user experience.
- Managed end-to-end project delivery meeting deadlines and project requirements while prioritising scalability, performance, and optimisation.

EDUCATION

Coventry University

BSc Software Engineering

City of Wolverhampton College

BTEC IT, Computer Science

Eucharistic Heart of Jesus Model College

O-Level
